

2026 CLIVIA KINGDOM -Pendulous Clivia Seed List

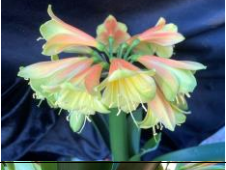

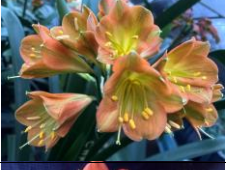

All our pendulous and interspecific flowers are open-pollinated and while considerable care is taken during pollination we cannot guarantee the desired or expected outcome. Unless specifically mentioned, every packet contains three seeds.

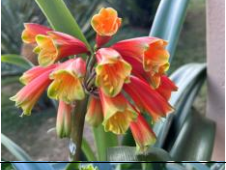

No	ID Code	Pod Parent	ID code	Pollen parent	Description where applicable	Rands
Nobilis						
1	5203 Pink Nobilis		Self			R360,00
Caulescens						
Mpumalanga's pride and fortunately abundant throughout our province and very well protected.						
2	5051 Yellow Caulescens		5040 Yellow Caulescens		Stunning plants that offset readily.	R360,00
3	5049 Kruger's Gold Red Caulescens		5046 Mariepskop Red Caulescens		30-40 year old specimens have stolons in excess of two meters.	R45,00
Robustas						
Our favourite pendulous species. Hardy, offset readily and grow out into spectacular large specimens.						
4	5028 Hidden Secret		Self		We have admired this robusta for 20 years. It is quite similar (but not the same plant) to Wayne Haseleu's Pondo Perfection and we have decided to rename it 'Paul's Pondo.'	R120,00
5	5018 Port St John's Robusta		5013 Black Sands Robusta			R60,00
6	5051 Green Skirt Robusta		5046 Maringa Flats Robusta			R60,00
7	5033 Pink Pastel Robusta		Self			R60,00

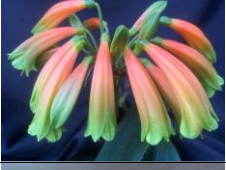

8	5060 South Port		5021 Garden Red			R60,00
Maxima						
9	5252 Ex Hilton Atherstone		5251 Ex Fred V Niekerk		These all grow out into magnificent tall specimens.	R60,00
Ndwedwe Alpha Yellow x Ice Giant Yellow Robustsa						
10	8311 Ndwedwe Alpha Y x Ice Giant Yellow Robusta		Self		Certainly in our collection, the finest yellow interspecifics bred out of yellow robustas. Very, very large bold clivias with huge flower counts on their umbels. These are both flowering for the first time.	R120,00
We have a very wide range of versicolor interspecifics, with striking, bold colours and diverse shapes. These interspecifics always push out their umbels above their leaves. Significant hybrid vigour and lower susceptibility to common clivia ailments have encouraged Clivia Kingdom to concentrate on producing a far greater selection of interspecifics using all the other pendulous species. Sadly, some of the crosses produce very few seeds, but the results are often amazing.

Clivia Kingdom has been using Hiraos as pod parents in many of our interspecific crosses. Some of the results have been quite spectacular and these seeds are quickly snapped up by collectors all over the world. We have introduced several new crosses as well as tried and tested crosses and would be delighted if any of these appealed to you.

Nimbicola "Dweller in the Mist" Nimbicola is one of the few natural hybrids in the world. Four types have been described and they are only found in a very restricted area (3 hectares) at Bearded Man on the South African/Swaziland border. They are very large impressive hybrids between caulescens and miniatas. Interspecific crosses using Nimbicola as pod parent have consistently produced interesting results, most of which have very high flower counts.
